CHRISTIE®

Software Release Notes

J Series version 1.1.5

This document describes the changes from J Series version 1.1.4 to 1.1.5.

Affected products

The following products are affected:

- All J Series projectors

Purpose of release

The primary purpose of this software release for J Series projector is:

- Added support for the new 0.37:1 HD lens.

Known issues

This release of J Series contains the following known issues:

- Colorspace may not be properly detected when using a DisplayPort signal with a low frame rate, such as 23 Hz, 24 Hz, or 25 Hz.

  Workaround: Manually select the correct colorspace from the menu. This prevents the problem from re-occurring.

- Turning on Accuframe for low frame rate signals results in a black screen. This is expected behavior for signals with a frame rate less than 60 Hz. Accuframe is designed only for 60 Hz and above.
