

CHRISTIE® ENERGY ⚡ GUIDE

Product category

ProAV

High brightness projection

Lumens: 40,950 ISO

Model

**Sapphire
4K40-RGBH**

Efficiency

Lumens per watt

14.1
lm/w

Here's how we calculate these results:

Energy efficiency is measured in lumens/watt. The projector's typical power consumption is used for this calculation. The typical power consumption is based on the projector running in normal mode, at maximum brightness with one live video input, in a temperature-controlled environment of 25 C (77 F).

BTU load is the amount of air that needs to be extracted from the projector's environment for adequate system cooling.

The cost of operation is based on the projector model's efficiency, which depends on your local utility rates and use.

9,895
BTU/hour

Best in class

**Any
questions**

For a detailed breakdown on how much you can save on operating costs using this projector, please contact a member of our sales team: christiedigital.com/contact-us
